Hands-on Lab: Advanced Dashboard Capabilities in Cognos Analytics

Estimated time needed: 45 minutes

Purpose of the Lab:

This lab focuses on enhancing skills in utilizing advanced features of IBM Cognos Analytics to create more dynamic and interactive dashboards. It delves into creating calculations, manipulating data points within visualizations, applying top/bottom settings on visualizations, and constructing navigation paths.

Additionally, the lab provides hands-on experience in filtering data within a dashboard. The exercises are designed to provide a deeper understanding of how to leverage Cognos Analytics for more complex data analysis and visualization tasks, moving beyond basic dashboard creation.

Benefits of Learning the Lab:

Engaging in this lab offers several key benefits for those interested in data analytics and visualization. You will acquire practical skills in advanced dashboarding techniques, such as creating custom calculations, effectively filtering and manipulating data, and utilizing Cognos Analytics to its full potential for comprehensive data analysis. These skills are vital for professionals in data analysis, business intelligence, and decision-making roles, as they allow for more nuanced and insightful analysis of data. The ability to create interactive and detailed dashboards enhances one's capability to present data in a more engaging and informative manner. This knowledge is particularly beneficial for those seeking to improve their data presentation skills, making complex data more accessible and actionable for decision-makers. Overall, the lab provides a strong foundation in advanced data visualization techniques, making it a valuable learning experience for advancing one's career in the field of data analytics.

Software Used in this Lab

Like the videos in the course, for the hands-on labs, we will be using IBM Cognos Analytics trial version (currently limited to 30 days), as this is available at no charge.

Dataset Used in this Lab

The dataset used in this lab comes from the VM designed to showcase IBM Cognos Analytics. This dataset is published by IBM. You can download the dataset file directly from here: CustomerLoyaltyProgram.csv

Objectives

After completing this lab, you will be able to:

- Start a new dashboard
- Create calculations
- Keep/exclude data points from a visualization
- Set top/bottom on a visualization
- Create and leverage navigation paths
- Filter data in a dashboard

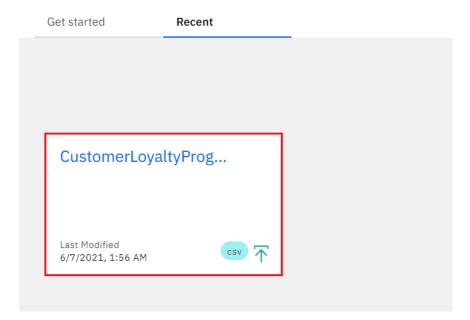

Exercise 1: Start a New Dashboard

In this exercise, you will start a new dashboard for working with advanced Cognos Analytics dashboard capabilities.

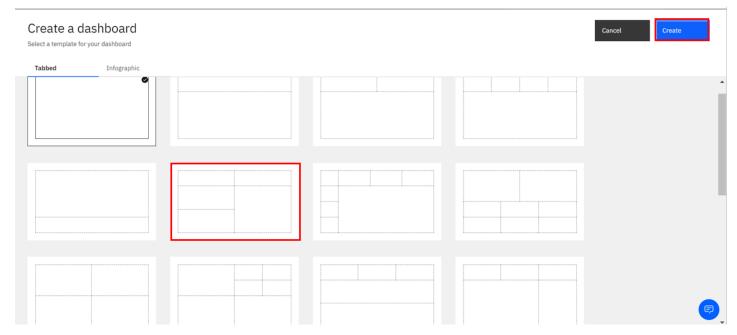

- 1. To sign in to the Cognos Analytics platform with your IBMid, go to myibm.ibm.com/dashboard/.
- 2. Enter your IBMid and password.
- 3. Scroll down and click **Launch**.

 ${\bf 4.} \ From \ the \ {\bf Recent} \ section, \ click \ the \ uploaded \ data \ file \ {\bf Customer Loyalty Program.csv}.$

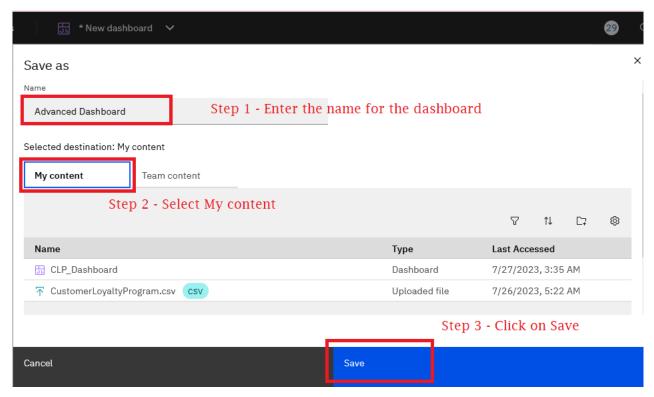

5. The template window will be displayed, allowing you to select the type of dashboard and the template style. Select the **Tabbed** dashboard style. This will allow you to have multiple pages for your dashboards. Select the *five-panel template*, then click **Create**.

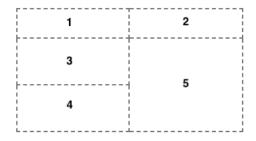

6. To save the newly created dashboard, press CTRL+S or click the Save icon and then click Save as.

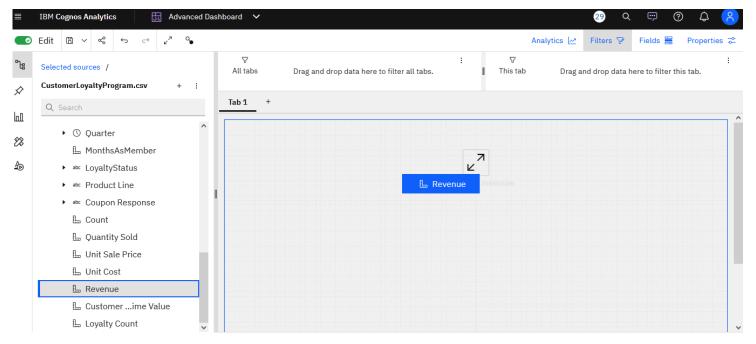

7. A new Save as window will pop up. Follow the steps as displayed below to save your dashboard as Advanced Dashboard in the My content section.

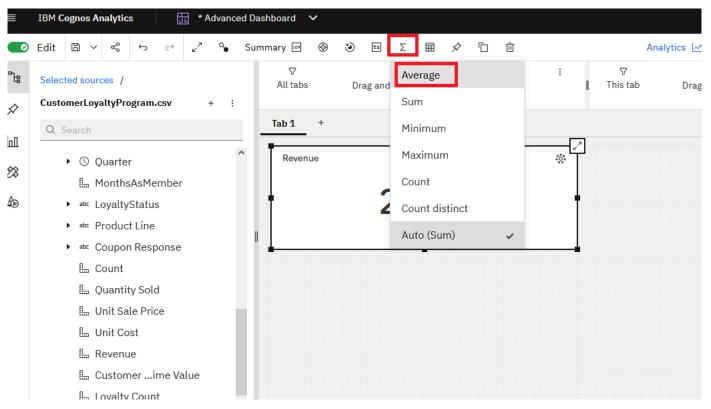

8. As you build the dashboard, the location placement for visualization widgets in the dashboard template will be referenced using the following Panel numbers.

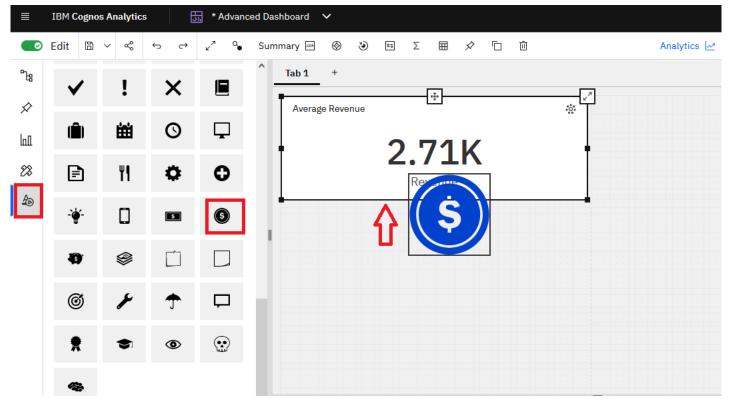

- 9. From the **Navigation** panel, select **Sources** to ensure the data source panel is open in the left pane.
- 10. From the data source panel, select Revenue and drag it to the center of Panel 1, releasing it once you see the drop zone turn blue.

11. Click the summary chart in Panel 1 to bring it into focus. From the on-demand toolbar that appears in the main toolbar, click **Summarize**, and then select **Average**.

- 12. In the summary chart in Panel 1, select the title of the visualization and change it to Average Revenue.
- 13. From the Navigation panel, select Widgets to open the widgets panel. Drag and drop Money coin from Shapes to the center of Panel 1.

- 14. To save the current work in the dashboard, press CTRL+S or click Save in the toolbar.
- 15. Your Panel 1 visualization should look similar to the one below:

Average Revenue

(§) = 100 Revenue

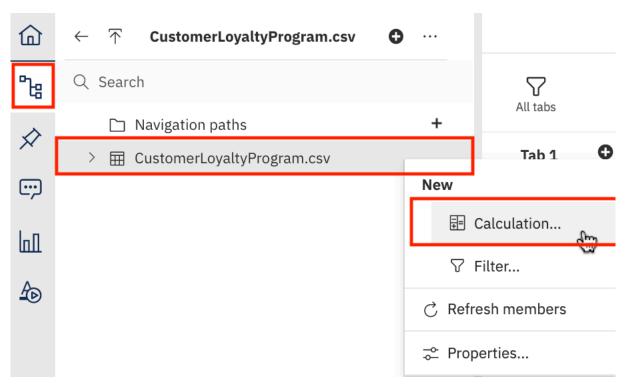

Exercise 2: Working with Advanced Cognos Analytics dashboard capabilities

In this exercise, you will practice some advanced Cognos Analytics dashboard capabilities.

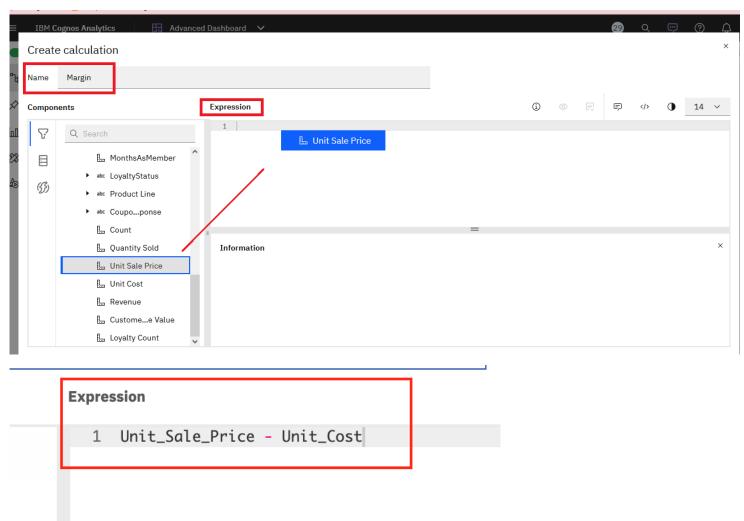

- Task A: Create calculations
- Task B: Keep/Exclude Data Points from a visualization
- Task C: Set Top/Bottom on a visualization
- Task D: Create and Leverage navigation paths
- Task E: Filter Data in the current tab

Task A: Create Calculations

- 1. From the **Navigation** panel, select **Sources** to open the data source panel if it is not already open. The data source panel displays the uploaded file **CustomerLoyaltyProgram.csv** as the selected source.
- 2. Right-click the **CustomerLoyaltyProgram.csv** data source and select **Calculation**.

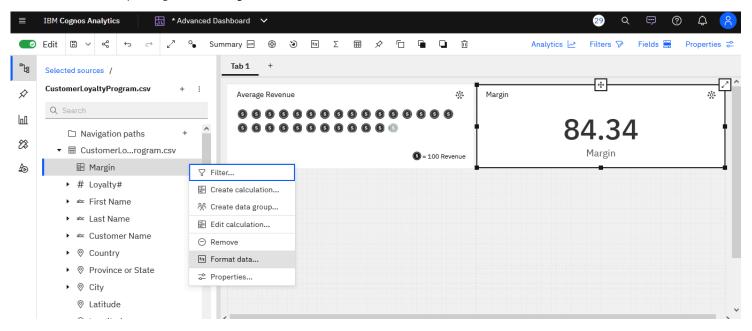

3. Change the calculation name to Margin. From the Components panel, drag Unit Sale Price to the Expression field, type a space, then the minus sign, -, to the right of it, and then drag Unit Cost to the right of that. Click OK.

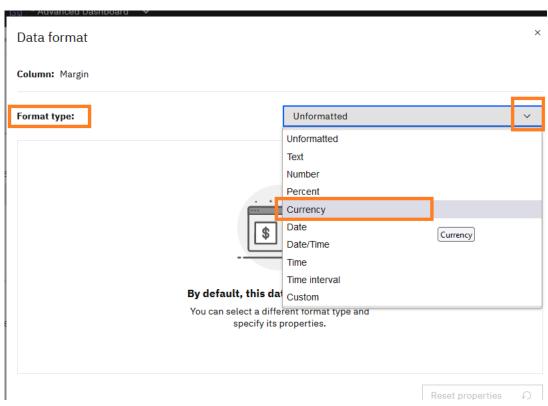

- 4. In the data source panel, expand CustomerLoyaltyProgram.csv if needed, and drag **Margin** to the center of **Panel 2**, releasing it once you see the drop zone turn blue.
- 5. Right-click the margin chart in Panel 2, point to Summarize, and then select Average.

6. From the data source panel, right-click on Margin and click Format data.

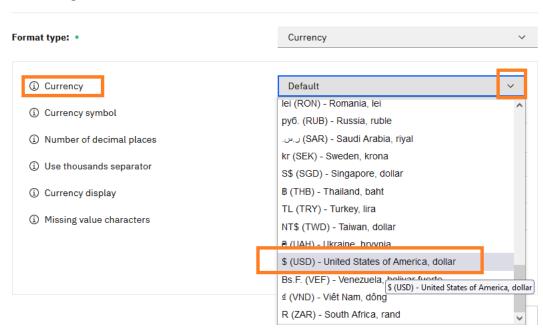

7. In the Format type list, select Currency.

8. Select \$ (USD) - United States of America, dollar as the currency and click OK at the bottom.

×

Column: Margin

- 9. In the margin chart in Panel 2, select the title of the visualization and change it to Average Margin.
- 10. To save the current work in the dashboard, press CTRL+S or click Save in the main toolbar.
- 11. Your Panel 2 visualization should look similar to the one below:

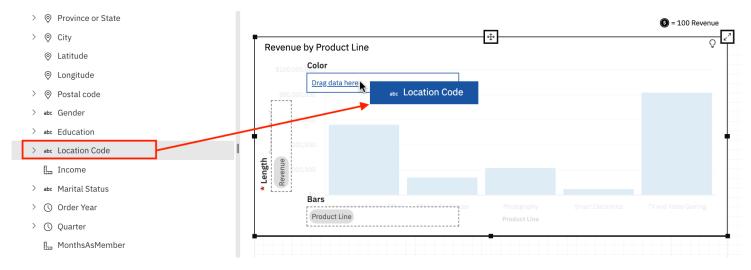

Average Margin

\$84.36

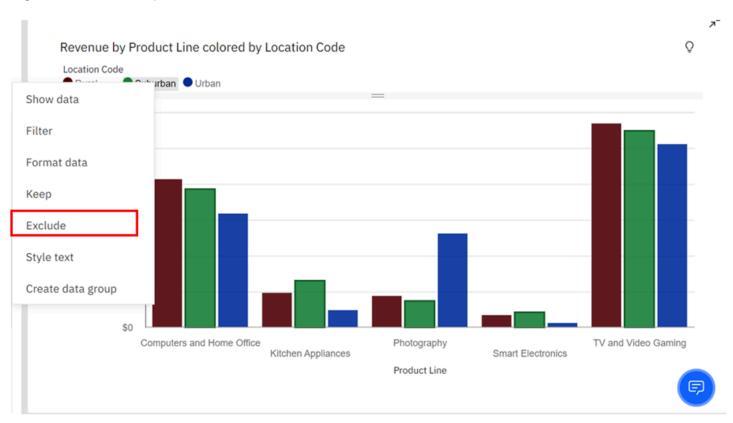

Margin

Task B: Keep/Exclude Data Points from a Visualization

- 1. In the data source panel, expand CustomerLoyaltyProgram.csv if needed. Press the CTRL key and select Revenue and Product Line and drag them both to the center of Panel 3, releasing them once you see the drop zone turn blue.
- 2. From the data source panel, drag **Location Code** to the **Color** drop zone of **Panel 3**.

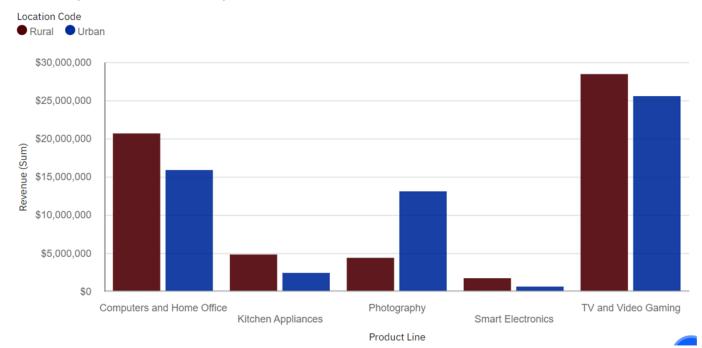

3. Right-click the **Suburban** data point in the Panel 3 visualization, and select **Exclude**.

- 4. To save the current work in the dashboard, press CTRL+S or click Save in the main toolbar.
- 5. Your Panel 3 visualization should look similar to the one below:

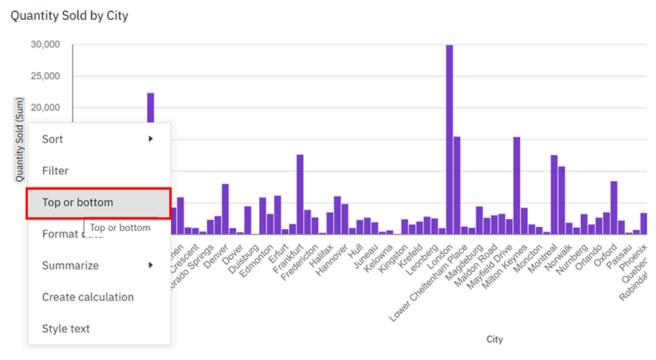

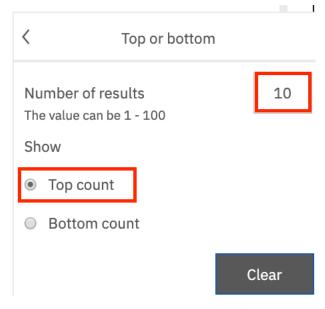

Task C: Set Top/Bottom on a Visualization

- 1. From the data source panel, press the CTRL key and select Quantity Sold and City, and drag them both to the center of Panel 4, releasing them once you see the drop zone turn blue.
- 2. Click the chart in Panel 4 to bring it into focus and render the on-demand toolbar.
- 3. Click the Change visualization button in the on-demand toolbar (which will currently say Map), then expand All visualizations, if needed, and select Column.
- 4. In Panel 4, right-click the axis label Quantity Sold (Sum) down the left side of the chart and select Top or bottom.

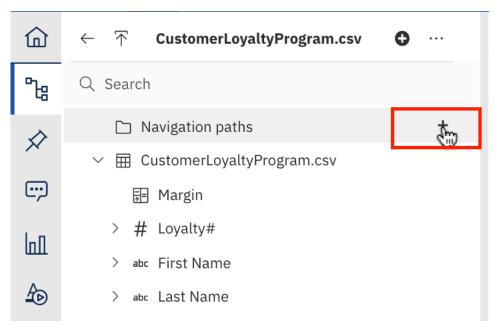

6. In the column chart in Panel 4, select the title of the visualization and change it to Top 10 Quantity Sold by City.

- 7. To save the current work in the dashboard, press **CTRL+S** or click **Save** in the main toolbar.
- 8. Your Panel 4 visualization should look similar to the one below:

Task D: Create and leverage navigation paths

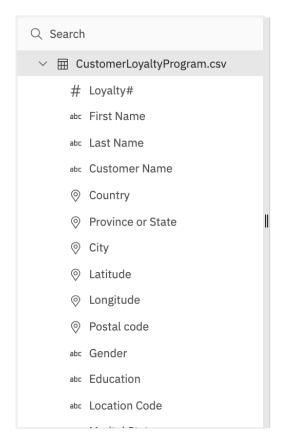

1. In the data source panel on the left, scroll to the top of the list and click the plus sign labeled Create navigation path to the right of Navigation paths.

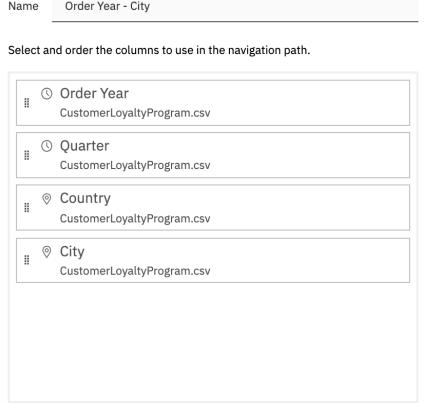

2. In the Create navigation path dialog box, expand CustomerLoyaltyProgram.csv, if needed. Drag Order Year, Quarter, Country, and City sequentially to the right hand panel of the dialog box, maintaining the order (shown in the image below). Once done, click OK.

Name

Create navigation path

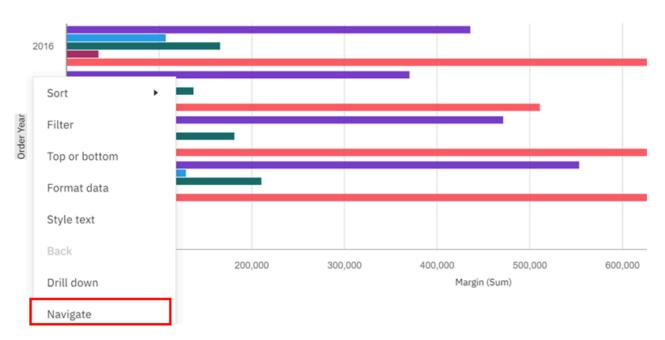

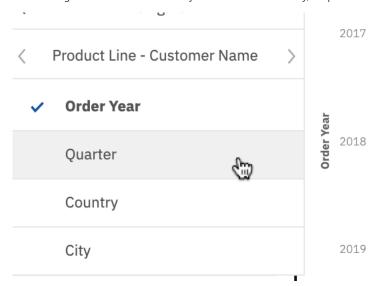

X

- 3. From the data source panel, press the CTRL key and select Margin, Product Line, and Order Year and drag them to the center of Panel 5, releasing them once you see the drop zone turn blue.
- 4. Click the line chart in Panel 5 to bring it into focus and render the on-demand toolbar.
- 5. Click the Change visualization button in the on-demand toolbar (which will currently say Line), then expand All visualizations, if needed, and select Bar.

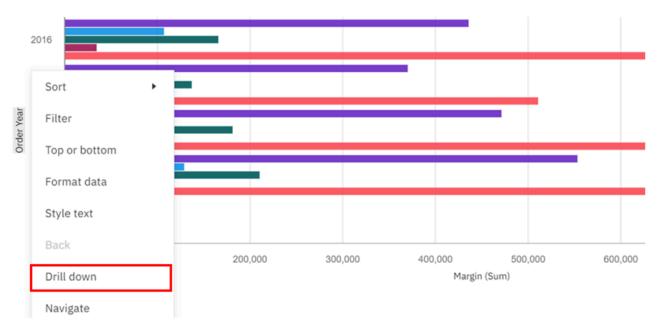

6. In Panel 5, right-click the axis label **Order Year** down the left side of the chart, and select **Navigate**.

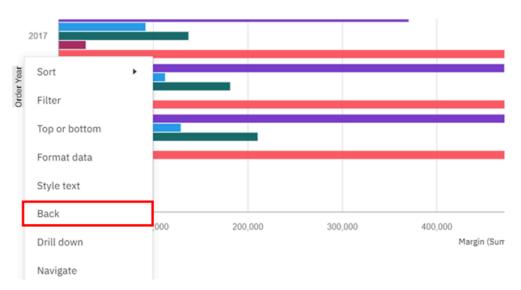

7. One by one, select the **Order Year**, **Quarter**, **Country**, and **City** options in the **Navigate** dialog box to view the different navigation paths and observe the resulting visualization in Panel 5 as you select each one. Lastly, keep the **Order Year** option selected.

- 8. Alternative interactive way with Drill down/back:
 - o In the bar chart in Panel 5, right-click the 2016 Smart Electronics bar of the bar chart, and select Drill down.

 $\circ~$ Now right-click the ${\bf Q1}$ - ${\bf Smart~Electronics}$ bar of the bar chart, and select ${\bf Back}.$

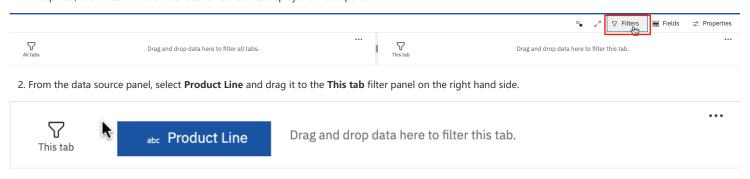

- 9. To save the current work in the dashboard, press **CTRL+S** or click **Save** in the main toolbar.
- 10. Your Panel 5 visualization should look similar to the one below:

Margin by Order Year colored by Product Line

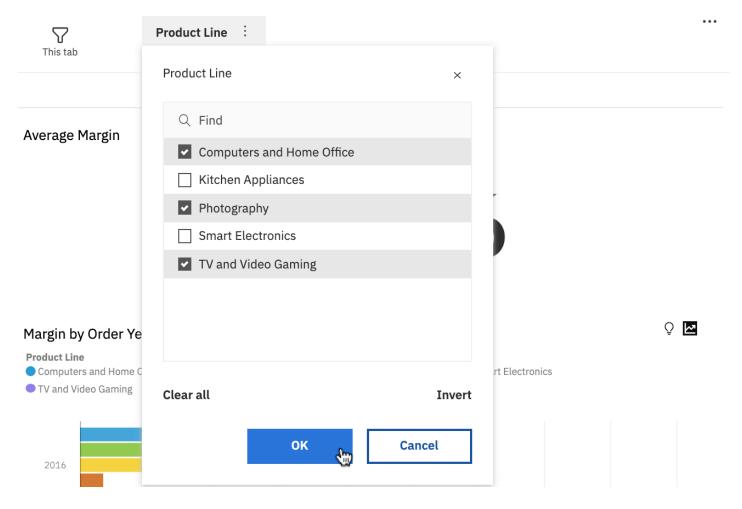

Task E: Filter Data in the Current Tab

1. If required, click **Filters** in the **Dashboard Toolbar** to display the filters pane.

3. Click the Product Line filter tab of the This tab filter panel. Select Computers and Home Office, Photography, and TV and Video Gaming, then click Done.

Your final dashboard should look similar to the one below. To save the current work in the dashboard, press CTRL+S or click Save in the main toolbar.

Feel free to change the appearance and layout of the dashboard you have just created.

Congratulations! You have completed this Lab
